

# Logistics: The advantageous order & job management service

The solution ensures effective order or job management and delivery process monitoring. It comprises a web-version for dispatchers and a mobile app for couriers.

## Web-version ensures effective operating procedure management

- Order placement. Create or import orders with detailed description;
- Planning and distribution. Select orders, vehicles and generate routes in a handy interface;
- Route optimisation. Get preliminary routes comprising data on the estimated arrival time and mileage;
- Delivery process coordination. Receive notifications and address the emerging issues via phone calls or a chat.
